### HEALTHCARE COST CONTAINMENT GROUP

As the cost of healthcare continues to be a major concern for all segments of our society, SGL's attorneys work to ensure that our clients are receiving the full benefit of their healthcare plans. Our focus is on fraud detection, prevention and overpayment recovery. To that end, our team works to identify potential areas of recovery and cost containment regarding healthcare programs. Consistent with our overall approach, our attorneys focus on swift, efficient problem solving for our clients.

SGL works closely with governmental entities, self funded plans, property/casualty insurers and third party payors of healthcare costs to identify areas of recovery and cost containment. To date, our attorneys have recovered approximately \$166 million on behalf of the United States Government and approximately \$152 million for over two dozen private group and property/casualty payors arising from abusive healthcare claim practices. We have the unique ability to provide our services for group health and pharmacy benefits programs.

Our group is defined by our collective experience, covering two decades of success in and out of the courtroom. Attorneys, paid claims data programmers and analysts form the core of our group. Our team worked in the government, law enforcement, insurance and healthcare fields. Our matters typically involve group payor, single plaintiff and class action litigation against providers seeking to recover overpaid health and pharmacy benefits due to fraud, abuse and inflated pricing.

Our approach is straightforward, effective and unconstrained by geographical boundaries. The majority of our cases involve sophisticated investigations conducted before litigation and outside the formal civil discovery process. We have strong litigation experience, including coordinating with law enforcement, insurance regulators and inspectors general offices. Our team possesses an understanding of healthcare billing and reimbursement, contracting, ERISA, state tort law, Medicare and Medicaid.

We pioneered the use of technologically advanced, automated data assembly and analysis. SGL prides itself on understanding our clients' business and legal challenges and we work together to obtain solutions consistent with the client's goals. Our ability to design creative and cost effective strategies, to identify potential areas of recovery and cost containment, provides a unique and important service to our clients.
